Таблица 1 – Предложения для определений и трактовок (Ценообразование активов)

№	Автор(ы), год	Публикация	Кандидатное предложение	Критерий отбора
1	Federico Severino (2024)	Long-term risk with stochastic interest rates	The rate-adjusted stochastic discount factor features the same long-term growth as the stochastic discount factor in the market but has no transient component in its Hansen–Scheinkman decomposition, capturing the long-term interest rate risk.	candidate_score=4.33; definition_pattern=False; topic_phrase_hits=4
2	Mohammed Hamdan; Pedro Fernandez Calavia; Nasir Aminu (2024)	Wealth and familiarity bias: sin stocks investment in Europe	Three quantitative methods are used to measure risk-adjusted returns of the sin stocks: the CAPM single-factor or market model, the Fama-French 3-factor model, and the Fama-French 5-factor model.	candidate_score=4.28; definition_pattern=False; topic_phrase_hits=4
3	Vitor Azevedo; Georg Sebastian Kaiser; Sebastian Mueller (2023)	Stock market anomalies and machine learning across the globe	By comparing 46 variations of machine-learning models, we find that the models with the highest return predictability apply a feed-forward neural network or composite predictors, with extending rolling windows, including elastic net as a feature reduction, and using percent ranked returns as a target.	candidate_score=3.44; definition_pattern=False; topic_phrase_hits=3
4	Ai He; Dashan Huang; Jiaen Li; Guofu Zhou (2023)	Shrinking Factor Dimension: A Reduced-Rank Approach	Empirically, we find that the RRA five-factor model outperforms the well-known	candidate_score=3.36; definition_pattern=False; topic_phrase_hits=3

			Fama–French five-factor model as well as the corresponding principal component analysis, partial least squares, and least absolute shrinkage and selection operator models for pricing portfolios.	
5	Kevin Aretz; Ming-Tsung Lin; Ser-Huang Poon (2022)	Moneyness, Underlying Asset Volatility, and the Cross-Section of Option Returns	Deriving predictions from a stochastic discount factor model, we show that the effect depends on whether variations in the asset's volatility are driven by systematic or idiosyncratic volatility.	candidate_score=3.28; definition_pattern=False; topic_phrase_hits=3
6	Luca Vincenzo Ballestra; Christian Tezza (2026)	A multi-factor model for improved commodity pricing: calibration and an application to the oil market	We define the vector of risk-premia Λ(t, X(t)) = (λx(t, S(t)) λδ(t, δ(t)) λr(t, r(t)) λv(t, v(t)))⊤as an affine function of X(t), that is Λ(t, X(t)) = Σ(t, X(t))−1 bA −A + [bB −B]X(t) , (3) where the physical drift parameters bA and bB are given by bA.	candidate_score=2.91; definition_pattern=True; topic_phrase_hits=0
7	Luca Vincenzo Ballestra; Christian Tezza (2026)	A multi-factor model for improved commodity pricing: calibration and an application to the oil market	However, we model different risk factors and we allow for a more parsimonious parametrization of the expressions for B and Ω0 (see Section 3.6). 2.1 Futures prices The futures price at time t with time to maturity τ = T −t can be computed as the risk-neutral expectation of the futures price: F(t, τ, X(t)) = E h eX(t+τ) F(t) i , 3	candidate_score=2.76; definition_pattern=True; topic_phrase_hits=0

			arXiv Template A PREPRINT where F(t) denotes the information available at time t.	
8	Othmane Zarhali; Cecilia Aubrun; Emmanuel Bacry; Jean-Philippe Bouchaud; Jean-François Muzy (2026)	A nested factor model for equity markets: reconciling multifractal stock returns and rough index volatilities	The MRM is classically defined as the limit measure: dM0,T (t) = lim l→0+ exp(˜ωl,T (t))dt (6) where ˜ωl,T is a stationary Gaussian process, whose mean is chosen such that E(e˜ωl,T (t)) = 1, and whose covariance.	candidate_score=2.74; definition_pattern=True; topic_phrase_hits=0
9	Luca Vincenzo Ballestra; Christian Tezza (2026)	A multi-factor model for improved commodity pricing: calibration and an application to the oil market	Separation of variables leads to the following system of ordinary differential equations (ODEs): dα(τ) dτ = β(τ)A + 1 2β(τ)Ω0β(τ)T, dβ1(τ) dτ = β(τ)B(1), dβ2(τ) dτ = β(τ)B(2), dβ3(τ) dτ = β(τ)B(3), (9) dβ4(τ) dτ = β(τ)B(4) + 1 2β(τ)Ω1β(τ)T, (10) where B(i) denotes the i-th column of B, i = 1, 2, 3, 4.	candidate_score=2.55; definition_pattern=True; topic_phrase_hits=0
10	R. Douglas Martin; Daniel Z. Xia (2022)	Efficient bias robust regression for time series factor models	Our application of the mOpt estimator to multifactor models focuses on fitting the Fama-French 3-factor and the Fama-French-Carhart 4-factor models to weekly stock returns for the year 2008, using both the robust t -statistics associated with the mOpt estimates and a new statistical test for differences between the mOpt and LS coefficients.	candidate_score=2.52; definition_pattern=False; topic_phrase_hits=2

11	Bernard Dumas; Paul Ehling; Chunyu Yang (2026)	The Debt Capacity of a Government	Studying their joint behavior, with overlapping generations and structural deficits arising from social security, we define government debt capacity as the level that can be just sustained with current fiscal parameters unchanged all the way to an unstable steady state, in which primary deficits last forever.	candidate_score=2.46; definition_pattern=True; topic_phrase_hits=0
12	Bingxin Li; Fangzheng Ou (2025)	Illuminating the Pricing Kernels: Short-Term and Long-Term Index Option Returns	We shed light on the pricing kernel puzzle (i.e., mixed results regarding the shape of the pricing kernel) by examining S&P 500 index option returns and empirical pricing kernels across a wide range of expiration dates (from 1 month to 1 year).	candidate_score=2.42; definition_pattern=False; topic_phrase_hits=2

Таблица 6 – Кандидаты для анализа определений и трактовок (Дискретность)

№	Автор(ы), год	Публикация	Кандидатное предложение	Критерий отбора
1	Hanwei Li; David Simchi-Levi; Michelle Xiao Wu; Weiming Zhu (2023)	Estimating and Exploiting the Impact of Photo Layout: A Structural Approach	In this paper, we define, estimate, and optimize the impacts of Airbnb photos on customers' renting decisions.	candidate_score=2.17; definition_pattern=True; topic_phrase_hits=0
2	Deniz Akturk; Ozan Candogan; Varun Gupta (2025)	Managing Resources for Shared Micromobility: Approximate Optimality in Large-Scale Systems	We model the above network inventory management problem as an infinite horizon discrete-time discounted Markov decision process (MDP) and prove the asymptotic optimality of a novel mean-field approximation to the original MDP as the number of stations becomes large.	candidate_score=1.39; definition_pattern=False; topic_phrase_hits=1
3	Luca Bertazzi; Riccardo Mogre; Nikolaos Trichakis (2024)	Dynamic Project Expediting: A Stochastic Shortest-Path Approach	We formulate a discrete-time, infinite-horizon Markov decision process in which the manager reviews progress in each period and decides which activities to	candidate_score=1.30; definition_pattern=False; topic_phrase_hits=1

			expedite to balance expediting costs with delay costs.	
4	Lars L. Nordén; Chengcheng Qu; Caihong Xu (2025)	Tick Size, Lot Size, and Liquidity in Futures Trading	In our model, we express the futures bid–ask spread, given lot-size, and tick-size restrictions, as a function of futures volatility and trading activity by informed and uninformed traders.	candidate_score=1.28; definition_pattern=False; topic_phrase_hits=1
5	Deniz Akturk; Ozan Candogan; Varun Gupta (2025)	Managing Resources for Shared Micromobility: Approximate Optimality in Large-Scale Systems	We consider a discrete-time model; each period begins with an initial inventory at each node in the network, and then, customers (demand) materialize at the nodes.	candidate_score=1.26; definition_pattern=False; topic_phrase_hits=1
6	Hao Zhang (2022)	Analytical Solution to a Discrete-Time Model for Dynamic Learning and Decision Making	The solution carries structural properties analogous to those obtained under continuous-time models, and it provides a useful tool for making new discoveries through discrete-time models.	candidate_score=1.25; definition_pattern=False; topic_phrase_hits=1
7	Yacine Aït-Sahalia; Jean Jacod; Dacheng Xiu (2025)	Continuous-Time Fama-MacBeth Regressions	We extend the classical Fama-MacBeth regression from the discrete-time setting to a continuous-time factor model, incorporating general dynamics for factors, idiosyncratic components, and factor loadings.	candidate_score=1.25; definition_pattern=False; topic_phrase_hits=1
8	Lars L. Nordén; Chengcheng Qu; Caihong Xu (2025)	Tick Size, Lot Size, and Liquidity in Futures Trading	However, regulations constrain futures trading at discrete prices and quantities by imposing a minimum tick size	candidate_score=1.21; definition_pattern=False; topic_phrase_hits=1

			and a minimum lot size.	
9	Eryn Juan He; Joel Goh (2022)	Profit or Growth? Dynamic Order Allocation in a Hybrid Workforce	We develop a discrete-time, stochastic dynamic program that captures the system's profit from serving demand and the platform's growth dynamics.	candidate_score=1.20; definition_pattern=False; topic_phrase_hits=1
10	Yicheng Bai; Omar El Housni; Billy Jin; Paat Rusmevichientong; Huseyin Topaloglu; David P. Williamson (2023)	Fluid Approximations for Revenue Management Under High-Variance Demand	This demand model is equivalent to using a discrete-time approximation to a Poisson process, but it has an important shortcoming.	candidate_score=1.20; definition_pattern=False; topic_phrase_hits=1
11	Xufeng Yang; Juliang Zhang; Wen Jiao; Hong Yan (2023)	Optimal Capacity Rationing Policy for a Container Leasing System with Multiple Kinds of Customers and Substitutable Containers	We formulate this problem as a discrete-time Markov Decision Process and show the submodularity and concavity of the value function.	candidate_score=1.20; definition_pattern=False; topic_phrase_hits=1
12	Yufeng Cao; Anton Kleywegt; He Wang (2026)	Dynamic Pricing for Two-Sided Marketplaces with Offer Expiration	Because solving this MDP directly is impractical for large market sizes, we study a discrete-time fluid approximation of the problem.	candidate_score=1.20; definition_pattern=False; topic_phrase_hits=1

№	Автор(ы), год	Публикация	Кандидатное предложение	Критерий отбора
1	Patrick Cheridito; Moritz Weiss (2026)	Reinforcement learning for trade execution with market and limit orders	Submit your article to this journal Article views: 3001 View related articles View Crossmark data Full Terms & Conditions of access and use can be found at Quantitative Finance, 2026 Vol. 26, No. 6, 833–853, Reinforcement learning for trade execution with market and limit orders PATRICK CHERIDITO and MORITZ WEISS * Department of Mathematics, ETH Zurich, 8092 Zurich, Switzerland (Received 9 July 2025; accepted 5 February 2026) In this paper, we introduce a novel reinforcement learning framework for optimal trade execution in a limit order book.	candidate_score=5.86; definition_pattern=False; topic_phrase_hits=5
2	Thibault Jaisson (2022)	Deep differentiable reinforcement learning and optimal trading	Keywords: Reinforcement learning, Optimal trading, Differentiable, Stochastic control, Dynamic programming, Deep learning, Multi-scale signals. ∗The author thanks Reda Messikh, St´ephane Daul and R´emy Cottet for useful discussions on the topic and feedbacks on the manuscript and two anonymous referees for their remarks and recommendations. †The opinions expressed in this article are solely those of the author. 1 1 Introduction Reinforcement learning is a field of machine learning which aims at finding op- timal sequences of actions in order to achieve a multi-step task or maximize a cumulative reward.	candidate_score=4.88; definition_pattern=False; topic_phrase_hits=4
3	Patrick Cheridito; Moritz Weiss (2026)	Reinforcement learning for trade execution with market and limit orders	Quantitative Finance ISSN: 1469-7688 (Print) 1469-7696 (Online) Journal homepage: www.tandfonline.com/journals/rquf20 Reinforcement learning for trade execution with market and limit orders Patrick Cheridito & Moritz Weiss To cite this article: Patrick Cheridito & Moritz Weiss (2026) Reinforcement learning for trade execution with market and limit orders, Quantitative Finance, 26:6, 833-853, To link to this article: © 2026 The Author(s).	candidate_score=4.58; definition_pattern=False; topic_phrase_hits=4

4	Thibault Jaisson (2022)	Deep differentiable reinforcement learning and optimal trading	We conclude on how to apply this in practice in Section 5. 2 Differentiable reinforcement learning 2.1 The reinforcement learning framework In the standard reinforcement learning setup, see [SB18], a learning agent is inter- acting with his environment in discrete time in the following way: At each time t, he sees the current sate of the environment st (in some settings the agent only sees a noised version of the environment but this is irrelevant in what follows) and chooses an action at.	candidate_score=3.83; definition_pattern=False; topic_phrase_hits=3
5	Luca Lalor; Anatoliy Swishchuk (2025)	Algorithmic and high-frequency trading problems for Semi-Markov and Hawkes jump-diffusion models	Algorithmic and High-Frequency Trading Problems for Semi-Markov and Hawkes Jump-Diffusion Models Luca Lalor1 and Anatoliy Swishchuk2 1University Of Calgary, Department of Mathematics and Statistics, University of Calgary, Calgary, AB T2N 1N4, Canada 2University Of Calgary, Department of Mathematics and Statistics, University of Calgary, Calgary, AB T2N 1N4, Canada March 6, 2025 Abstract This paper introduces a jump-diffusion pricing model specifically de- signed for algorithmic trading and high-frequency trading (HFT).	candidate_score=3.69; definition_pattern=False; topic_phrase_hits=3
6	Igor Halperin (2022)	Reinforcement Learning and Stochastic Optimization: A Unified Framework for Sequential Decisions	Based on my own experience of interactions with peo- ple working in quantitative finance, I would assume that (i) more people have heard the term ‘reinforcement learning’ than ‘sequential decision problems’, and (ii) most people who have heard about reinforcement learning, heard it in the com- bination ‘deep reinforcement learning’, to the extent that the two are nearly identified in the mind of many people.	candidate_score=3.65; definition_pattern=False; topic_phrase_hits=3
7	Michael Goldstein; Amy Kwan; Richard Philip (2023)	High-Frequency Trading Strategies	The order book imbalance immediately before each order submission, cancellation, and trade suggests that high-frequency traders strategically use limit order book information to supply liquidity on the thick side of the order book and demand liquidity from the thin side.	candidate_score=3.40; definition_pattern=False; topic_phrase_hits=3
8	Rafael Baptista Palazzi (2025)	Trading Games: Beating Passive Strategies in the Bullish Crypto Market	Empirical results demonstrate that the pairs trading strategy consistently outperforms conventional pairs trading and passive approaches, generating significant risk-adjusted excess returns, while maintaining low market exposure.	candidate_score=3.26; definition_pattern=False; topic_phrase_hits=3
9	Y. J. Sun; Z. Y. Lu; C. H. Liao; T. S. Dai; S. M. Yuan (2026)	Optimizing stock portfolios with deep reinforcement learning after	Keywords: Machine learning; Deep learning; Deep reinforcement learning; Portfolio management; Stock selection; Portfolio	candidate_score=3.19; definition_pattern=False; topic_phrase_hits=3

		FNN-based fundamental analysis	optimization JEL Classification:: G11, C61 1.	
10	Patrick Cheridito; Moritz Weiss (2026)	Reinforcement learning for trade execution with market and limit orders	Keywords: Trade execution; Limit order book; Market order; Limit order; Reinforcement learning JEL Classification: C45, C61, C63, G17 1.	candidate_score=3.19; definition_pattern=False; topic_phrase_hits=3
11	Thibault Jaisson (2022)	Deep differentiable reinforcement learning and optimal trading	Applied to the problem of optimal trading strategies, it enables us to optimize more complex market models with a large number of meta-parameters. 2.2 The differentiable reinforcement learning framework We define the differentiable reinforcement learning framework as a particular case of discrete time stochastic control: • The next state st+1 is a known differentiable transition function Φ of the current state st, the chosen action at and a random variable Ut+1 that we can sample from st+1 = Φ(st, at, Ut+1).	candidate_score=2.81; definition_pattern=False; topic_phrase_hits=2
12	Igor Halperin (2022)	Reinforcement Learning and Stochastic Optimization: A Unified Framework for Sequential Decisions	In addition to these two sub-groups of readers, we can envision a yet third group of professionals that have already learned elements of reinforcement learning, e.g. from some video lectures or by reading some chapters from the clas- sical book by Sutton and Barto, and already have a limited experience of applying available deep reinforcement learning libraries to real-world problems.	candidate_score=2.60; definition_pattern=False; topic_phrase_hits=2

Таблица 26 – Кандидаты для анализа определений и трактовок (Динамическое управление)

№	Автор(ы), год	Публикация	Кандидатное предложение	Критерий отбора
1	Junyi Guo; Xia Han; Hao Wang (2025)	Exploratory mean-variance portfolio selection with Choquet regularizers	Exploratory mean–variance portfolio selection with Choquet regularizers Junyi Guoa, Xia Hana and Hao Wang∗b aSchool of Mathematical Sciences and LPMC, Nankai University, Tianjin, 300071, China bSchool of Mathematical Sciences, Nankai University, Tianjin, 300071, China Abstract In this paper, we study a continuous-time exploratory mean-variance (EMV) prob- lem under the framework of reinforcement learning (RL), and the Choquet regularizers are used to measure the level of exploration.	candidate_score=3.66; definition_pattern=False; topic_phrase_hits=3

2	Tiantian Mao; Ruodu Wang; Qinyu Wu (2026)	Model Aggregation for Risk Evaluation and Robust Optimization	Via an equivalence property between the MA and WR approaches, new axiomatic characterizations are obtained for the value at risk and the expected shortfall (also known as conditional value at risk).	candidate_score=3.31; definition_pattern=False; topic_phrase_hits=3
3	Xia Han; Liyuan Lin; Ruodu Wang (2025)	Diversification Quotients: Quantifying Diversification via Risk Measures	In particular, for the popular risk measures value at risk and expected shortfall, the corresponding DQ admits simple formulas, and it is efficient to optimize in portfolio selection.	candidate_score=3.28; definition_pattern=False; topic_phrase_hits=3
4	David Landriault; Bin Li; Yuanyuan Zhang (2026)	Robust Mean–Variance Portfolio Optimization: Mean–Variance–Variance Criterion Versus Mean–Variance–Standard Deviation Criterion	ABSTRACT We study a dynamic portfolio optimization problem under the mean–variance–variance (M-V-V) criterion proposed by Maccheroni et al.	candidate_score=3.18; definition_pattern=False; topic_phrase_hits=3
5	Thomas M. Idzorek (2023)	Personalized Multiple Account Portfolio Optimization	Here, I incorporate that same generalized innovation into the multiple account setting with taxes (see also, Idzorek and Kaplan 2023, Chapter 11).3 MVO, Fund-of-Funds Optimization, and Nonpecuniary Preferences Equation 1 presents the standard mean-variance objective function for identifying the ideal strategic asset allocation (SAA). where ObjSAA ¼ investor's objective function for the SAA mix; RSAA ¼ expected total return for the SAA Financial Analysts Journal | A Publication of CFA Institute 156 mix; kSAA ¼ investor's systematic risk aversion coeffi- cient; and r2 SAA¼ expected variance of return for the SAA mix.	candidate_score=2.92; definition_pattern=False; topic_phrase_hits=2
6	Rui Ding (2023)	f-Betas and portfolio optimization with f-divergence induced risk measures	Similar to CVaR under smaller tail risk levels (with the tail risk level of 1 being the risk-neutral expectation), f-divergence induced risk measures transition from risk-neutral expectation to worst-case	candidate_score=2.61; definition_pattern=False; topic_phrase_hits=2

			loss as the risk aversion parameter(which is also a statistical confidence region radius) increases from zero to larger values, hence providing a complete and continuous middle-ground between risk-neutral and worst-case loss averse.	
7	Rui Ding (2023)	f-Betas and portfolio optimization with f-divergence induced risk measures	f-Betas and Portfolio Optimization with f-Divergence induced Risk Measures Rui Ding⋆ ⋆Department of Applied Mathematics and Statistics, Stony Brook University, Stony Brook, NY, USA, 11794 ⋆Correspondence: rui.ding.1@stonybrook.edu Abstract In this paper, we build on using the class of f-divergence induced coherent risk measures for portfolio optimization and derive its necessary optimality conditions formulated in CAPM format.	candidate_score=2.56; definition_pattern=False; topic_phrase_hits=2
8	Junyi Guo; Xia Han; Hao Wang (2025)	Exploratory mean-variance portfolio selection with Choquet regularizers	Given a concave function h : [0, 1] →R of bounded variation with h(0) = h(1) = 0 and Π ∈M, the Choquet regularizer Φh on M is defined as Φh(Π) ≡ Z h ◦Π([x, ∞))dx := Z 0 −∞ [h ◦Π([x, ∞)) −h(1)] dx + Z ∞ 0 h ◦Π([x, ∞))dx.	candidate_score=2.52; definition_pattern=True; topic_phrase_hits=0
9	Thomas M. Idzorek (2023)	Personalized Multiple Account Portfolio Optimization	Inevitably, the effective asset allocation of the portfo- lio will drift away from the target asset allocation, and an optimizer is needed to consider a complicated set of interconnected tradeoffs involving trading costs, tax implications, asset location, alphas, tracking error, and potentially nonpecuniary characteristics.	candidate_score=2.44; definition_pattern=False; topic_phrase_hits=2
10	Xue Dong He; Zhaoli Jiang; Jianming Xia (2026)	Dynamic Portfolio Selection Under Monotone Additive Statistics in a Stochastic Volatility Model	We study a dynamic portfolio selection problem in which an agent trades a risk-free asset and a risky stock with stochastic volatility to optimize her investment performance measured by a monotone additive statistic of her terminal wealth or log investment return.	candidate_score=2.41; definition_pattern=False; topic_phrase_hits=2

11	Marcos Escobar-Anel; Tobias Lausser; Rudi Zagst (2025)	Closed-Form Optimal Investment Under Generalized GARCH Models	ABSTRACT This paper introduces a new class of stochastic volatility models for asset prices, the generalized Heston Nandi GARCH (GHN-GARCH), with the primary objective of optimal dynamic asset allocation under expected utility theory for constant relative risk aversion investors.	candidate_score=2.39; definition_pattern=False; topic_phrase_hits=2
12	Jose Blanchet; Lin Chen; Xun Yu Zhou (2022)	Distributionally Robust Mean-Variance Portfolio Selection with Wasserstein Distances	We revisit Markowitz's mean-variance portfolio selection model by considering a distributionally robust version, in which the region of distributional uncertainty is around the empirical measure and the discrepancy between probability measures is dictated by the Wasserstein distance.	candidate_score=2.37; definition_pattern=False; topic_phrase_hits=2
